BRIEF DESCRIPTION OF THE DRAWING

For a more detailed understanding of the invention, reference will be made to the accompanying drawing, which is a schematic illustration of the concepts embodied in the invention.

On page 9 of the specification, please replace paragraph 17 with the following:

[0017] According to one embodiment and as illustrated in the Figure, the present invention discloses a method for determining an optimal piano hammer felt voicing technique for voicing an unvoiced tone to so as to achieve a predetermined standard of tonal quality associated with a given voiced tone using a computer program. According to this embodiment, the present method comprises a) creating a library comprising at least two records wherein each record comprises a transfer function and a voicing technique wherein the transfer function mathematically expresses the effect upon tonal quality of said voicing technique; b) determining the harmonic profile for each of the unvoiced and voiced tones; c) identifying the record in the library that contains the transfer function that is most similar to a hypothetical transfer function that would be calculated from the harmonic profiles of the unvoiced and voiced tones; and d) disclosing the voicing technique that is contained in said identified record.
